

Maubin Report

We have 67 children in total, studying in academic year, 2009. It is to say that educational progress of primary and middle school children has much improved. There has been at least ten children, scoring high grades between 1 to 10 in their monthly test exams. All of them try hard and we have been encouraging them to keep trying. High school children try hard too. We make them attend suitable tuitions for weak subjects. They are all in good health. All children have been studying happily. Thank you so much for helping the children and we hope you will be able to help us more.

Living Water Improvement Report

Education

There have been educational improvements of the children during 2009 academic year. There is no child who failed in monthly test exams. At first, some of the newly arrived children had some difficulties due to sudden changes of environment and language. Anyway, our systematic supervision and hard work of the children make good results. Five of our primary children achieved high grades between 1 to 10 every month. Eight boys and girls in middle school also score high marks and grades.

Health

There has been no health problems except some minor skin diseases caused in rainy season. We make them do physical exercises such as skipping and walking everyday. We feed them a variety of food for balanced diets in order to become more active and stronger.

Morality

We have always been teaching our children making good use of Holy Bible to maintain good morality.

Newly arrived children are introduced to our rules and make them follow. New children imitate good manners and morality from former ones who stand as their model.

Spirituality

Not only reading the bible, reciting the verses and praying twice a day in the morning and night but also attending our sunday school regularly helps the spiritual growth of the children.

Daw Ni Ni Tar

Justina Home Improvement Report

We have educational improvements this year. Two children stand first in their monthly test exams. Other children have also been trying to improve their studies. New children encounter some difficulties in language as they came from remote areas. At the beginning, they are not healthy due to the environmental changes. But now, every child is growing up well physically, mentally and spiritually. Some older children were sent to basic computer courses.
